

Fishing in Deep Waters

On March 26, 2010, a South Korean Navy corvette, ROKS Cheonan, was suddenly shattered by an explosion, which tore it apart in two pieces, causing the death of 46 sailors. This occurred just 2 km off the South-West Coast of Baengnyeong Island in the Yellow Sea. This island is situated outside North Korea and may be compared to the Quemoy Islands which lie close to mainland China but host Taiwan military and where mutual aggression between the two Chinas was focused.

Instantly, suspicion about the possibility about a North Korean attack was raised, but first damped by the South Korean government. Instead, the wreck was fished up from the bottom of the sea with a huge floating crane, the main (upper) part on April 15, nine days later the bow of the ship – together with parts of the cause of the disaster: it was a torpedo.

If It Quacks Like a Duck ...

Has it ever occurred before that fragments of a torpedo surfaced after it was used to sink a ship? I do not think, and if the masterminds behind the crime had imagined the possibility, they had probably been more selective when choosing their weapon. It seemed perhaps more likely if the Iceberg that sank the Titanic would be reconstructed. Now they may change the type of torpedo for their next mission, if they are able to learn from mistakes.

Reuter's brought an important information [1]: *"The metallic debris and chemical residue appear to be consistent with a type of torpedo made in Germany,"* so far so good, but then it comes, *"indicating the North may have been trying to disguise its involvement by avoiding arms made by allies China and Russia."* In analogy: If it quacks like a duck, wags and walks like a duck, swim and fly and even look like a duck, then it is definitely another animal disguised as a duck.

North Korea has denied any involvement but has already been condemned by its traditional enemies. Michael Rivero has exhibited pictures and drafts, illustrating that this is a German torpedo [2]. This makes it probable (but not absolutely proven) that it was fired by a German submarine. That Germany itself should have played the game, is highly improbable. There is one country, in possession of now six German submarines, which favours false-flag attacks and would not be suspected of carrying one out so far away: Israel. Could they, after all, be responsible?

Technically it is possible. The dolphin-submarines, with a crew of 35-50 men, can be underways in up to 50 days and stay submerged in up to a week. They are equipped with conventional torpedos plus nuclear missiles, which made a detour to San Diego necessary, whereby they confirmed that every country on the earth can be reached by Israel's missiles – also Germany itself with their generous (partly) presents. Which motive could Israel have for the attack, if it is indeed behind it?

- 1 North Korea has already been branded an enemy of Israel in connection with the attempted construction of a nuclear power plant in the Syrian desert, bombed by the Israeli airforce in 2007 [3].
- 2 A new war far away from the own country could help distracting the unpopularity that Israel is facing world-wide as the right-wing government accelerates its ethnic cleansing in the Palestinian colony.
- 3 It was a test for the coming false-flag attack, to be described below.
- 4 It was even a demonstration of the global threat described above. In order to work, it demands an admission, but that can be delivered later.

Just to avoid misunderstandings: The suspicion that Israel is behind is based on a single evidence (the German torpedo), combined with its abilities, tradition for false-flag attacks

and motives, combined with absent motives by another nation. A virtual proof is not available.

The Next False-Flag Mission

Israel leads since many years a war of words against Iran [4], and it was not difficult to prophesize the upcoming event [5]. On May 30, 2010, it was announced that three of the Dolphin-submarines would be stationed permanently near the Iranian shores [6]. One of them will in near future sink a ship, big or small, in the Persian Gulf, claiming that the Iranians did it. Actually, a wooden rowing boat suffices, the Western Media will make a battleship out of it (see how the Gulf of Tonkin was host to a crucial false-flag event in the Vietnam War [7])

May 30, 2010

The German Torpedo used was either of type DM2 A3 or A4. The DM2 A-3 version is also used [beside by Germany] by the Norwegian Ula class (German Type 210 subs) ... The Italian Type 212 B submarines use the DM2 A-4 version. The Israeli Dolphin-class (German Type S-300) are also being equipped with the DM2 A-4 Torpedo [8], so either Norway, Germany, Italy or even **Israel bombed the South Korean ship** – bets permitted.
